

## Measurements at your fingertips!

### CAPTEVIA, what is it?

- An application for iPad, iPhone and iPod Touch, available for free in the Apple Store.
- A tool designed to simplify taking measurements; the measuring tape and callipers are replaced by taking a photograph.
- A user-friendly interface that uses your powerful iPhone or iPad and their sensors (accelerometer, inclinometer) to provide optimal photography of your patients.
- The possibility to export photographs to our RODIN4D CAD/CAM software, equipped with the "Import CAPTEVIA®" option; your patient's contours are detected and measurements are adapted to a 3D library of your choice.
- An evolving application that today allows braces measurements to be taken until other modules completing its possibilities become available (knees, patients lying down, minerva braces, lower limb without foot, etc.)
